

Kirana Shop AI

An AI business partner for every neighbourhood dukaan.

Payments at the kirana are already digital. Kirana Shop AI helps the rest of the shop catch up: billing, online orders, udhaar and daily decisions, in the shopkeeper's own language.

DISCOVERY QUESTIONS

- 1 What takes the most time in your day?
- 2 What do you still do by hand?
- 3 Where do mistakes happen?
- 4 What would you actually use during a busy hour?

Questions that guide our merchant discovery and pilot validation.

WORKFLOW OBSERVATION

OPPORTUNITY HYPOTHESIS

Billing

Items are often identified from memory, barcodes or a handwritten parchi, then entered by hand.

→ **One bill from any input: scan, photo, voice or parchi.**

Payments

The QR payment is digital, but it is often not linked to the bill, the stock or the notebook.

→ **Tie each verified payment to its bill and stock.**

Store sales

Many stores still rely on walk-ins and phone calls.

→ **A shareable storefront from the same catalogue.**

Udhaar

Credit is often kept in a notebook that can't see who has paid digitally.

→ **A Khata that tracks dues and helps collect them.**

Decisions

Transaction data exists, but there is little time to interpret it during the day.

→ **An adviser you can simply ask, out loud.**

INITIAL WORKFLOW OBSERVATIONS · TO BE VALIDATED DURING THE PILOT

Payment is digital. Everything around it isn't.

Only one step in the day is connected. The other five live in heads, slips and notebooks.

The QR says money came in. It can't say what sold, what to reorder, or who still owes the shop money.

PUBLIC DATA DPIIT/ONDC release, 12 Jun 2026 (stores, FMCG share). NPCI UPI statistics, Aug 2026: 24,508.96 mn transactions.

One shop profile. Four daily jobs. One loop.

Not four apps stitched together. Every bill, order and payment updates the same record, so Salaahkaar always has something true to say.

Sell at the counter. Sell from the QR. Same catalogue.

COUNTER · one bill, four ways in

Barcode
Scan the pack

Photo
Point the camera

Voice
"2 doodh, 1 bread"

Parchi
Snap the written list

 **Human in the loop**

AI proposes the bill; the shopkeeper confirms. Any line it isn't sure about stays editable before payment.

CONCEPT SCREENS · DEMO STORE & DATA

SHOP · one QR, one storefront

Customer scans the shop's QR or a shared link

Browses live prices and stock, from the counter's catalogue

Pays through Paytm checkout

Tracks the order: received → preparing → ready

A new sales channel without a separate e-commerce setup.

Khata tracks the dues. Salaahkaar suggests what's next.

KHATA

Dues ranked by age. Reminders sent only after approval.

SALAAHKAAR · THE AI CORE

A voice-first adviser that speaks the shopkeeper's language.

"Aaj kitna sale hua?"

"Kaunsa item slow chal raha hai?"

"Kis customer ka paisa baaki hai?"

"Kal kya stock mangwana chahiye?"

Grounded, not guessed

Answers come from the shop's own bills, stock and Khata through structured tools. It shows the source; it doesn't invent numbers.

Hindi and Hinglish, spoken

Built for code-mixed speech using Indian-language speech-to-text and text-to-speech (e.g. Sarvam APIs).

Suggests, never acts alone

Reorders, reminders and anything touching money wait for the shopkeeper's "haan".

One transaction, all the way to a decision.

UNDER THE HOOD: THE GOLDEN PATH WE BUILD ON HACKATHON DAY

Parchi photo → OCR + confirm → Invoice → Paytm checkout (staging) → Server-side verification → Stock + Khata update → Salaahkaar insight

DEMO STORE · ILLUSTRATIVE NUMBERS

Payments bring merchants in. Daily value keeps them.

5 crore+

merchants & businesses Paytm says it powers to accept digital payments

Source: paytm.com/about-us, reviewed 25 Sep 2026

WHAT PAYTM COULD GAIN · HYPOTHESES TO TEST IN PILOT

More daily touchpoints

Billing, Khata, Shop and advice every day, not only a payment alert.

More payment-linked activity

Eligible digital orders can use Paytm checkout, keeping payment and order records connected.

A stickier merchant relationship

The more of the shop runs here, the harder it is to replace.

Relevant, consented cross-sell

Devices and financial products shown only with eligibility and consent.

Not “Soundbox 2.0”. Soundbox confirms the payment. We connect it to the bill, stock, Khata and the next decision.

How it earns, and how we build it.

BUSINESS MODEL · merchant value first, monetisation second

Free core

Counter billing, basic Khata, shop link. Goal: daily use.

Free

Pro · AI

Salaahkaar, automations, reminders, richer storefront.

₹149/mo*

Ecosystem upside

Device attach and financial-product distribution, with eligibility and consent.
